Office Action Summary	Examiner	Art Unit					
	Rina I. Duda	2837					
The MAILING DATE of this communical Period for Reply	tion appears on the cover sheet with	the correspondence address					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Page 2

Drawings

1. The drawings are objected to because the empty boxes must be textually labeled. See 37 CFR 1.83(a). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 2, 3, 6, and 7 are objected to because of the following informalities: The value/description of parameter α must be defined in the claim. The examiner suggests

including the subject matter of claim 3 into claim 2 and the subject matter of claim 7 into claim 6. Appropriate correction is required.

Page 3

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1, 4, 5, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Glennon et al (US Patent 4608527).

The preamble was not accorded any patentable weight because it merely recites the purpose of the method and the body of the claim does not depend on the preamble for completeness, the method steps are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Claim 1, Glennon et al describe a method for controlling an electric motor comprising sensor 17 for determining the speed of the motor 11, means 47 for determining a load speed based on the load position, means 49/51 for combining the determined load speed and the determined motor speed, and means 100/19 for controlling the speed of the motor.

Claim 4, Glennon et al describe regulating the combined speed so that the motor operates at a desired/referenced speed using means 52-53/57.

Application/Control Number: 10/763,765

Art Unit: 2837

Claim 5, Glenon et al describe a method for controlling the operation of an electric motor 11 comprising measuring the motor speed using sensor 17, measuring the load speed using means 28/32/45, comparing the motor speed and the load speed, obtaining a combined speed using means 49/51, and controlling the speed of the motor using means 100/19.

Page 4

Claim 8, Glennon et al describe regulating the combined speed so that the motor operates at a desired/referenced speed using means 52-53/57.

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The documents cited in form PTO-892 describe other systems for controlling electrical motor using a difference between a load speed and a motor speed.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rina I. Duda whose telephone number is 571-272-2062.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Martin can be reached on 571-272-2107. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/763,765
